

KIMER

We create space

Since 1963

**Commercial
Equipment**

Advantages

Adaptability: Wide variety of back panels and accessories, facilitating the display of different products.

Wide range of colors, including RAL 9010 white with CE certification for the food industry.

Full range of sizes, making it a product adaptable to any retail space.

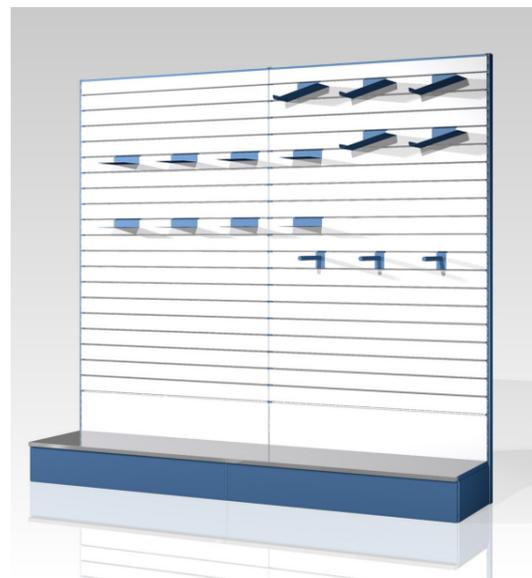

Description

Versatile system, developed to adapt to all businesses.

Thanks to the wide variety of sizes, accessories, finishes, and colors, it can work in any commercial environment.

We adapt to all your company's needs.

Applications

Suitable for use in a wide variety of commercial activities, such as:

Food, Image and Sound, Stationery, Toys, DIY, Appliances, Sports or Automotive.

Moreover, since most elements can be customized with vinyl or perforation systems, each shelf represents a personalized solution.

Since 1963

1 Specific project

Kimer commercial equipment systems allow countless combinations; in addition, our technical department is at your disposal should you need a personalized solution.

2 Adaptability

Our flexible machinery allows us to adapt to your ideas to create a product tailored precisely to your needs.

3 Corporate customization

Both in vinyl and slotted designs; Kimer offers you the possibility to customize your system with your company's logo.

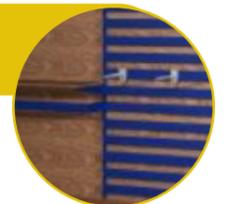

4 Accesories

The wide variety of accessories available for the commercial equipment system allows us to meet all our customers' needs.

5 Finishes

We use state-of-the-art machinery to paint our products, thus obtaining the best finish on the market.

KIMER **ADVANTAGES**

- 3
- 4
- 5

Finishes

Kimer uses only high-quality epoxy paint manufactured in Europe. We have the most modern machinery to achieve the best corrosion protection results, without sacrificing a uniform and aesthetic finish. Our automated robotic tunnels apply the following treatments:

Degreasing.

Phosphating: Kimer does not use any polluting elements in this process

Rinse with tap water.

Rinse with demineralized water: Water used in our facilities is treated with reverse osmosis for reuse.

Painting with flame-retardant paint, class M-1 according to UNE-23.727-90, applied via electrostatic spraying.

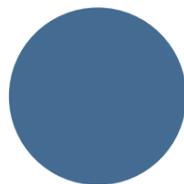

STANDARD COLORS

R&D DEPARTMENT

Kimer works with the most advanced tools on the market, allowing us to meet even the most specific storage needs.

Our R&D team will develop the right solution for your warehouse requirements.

We create space

Main components

Posts

Posts in rectangular tube form, developed for maximum functionality and resistance. They have front and side perforations, spaced every 50mm.

We offer two post models, depending on the system's load requirements:

- Medium Load:** Rectangular tube 60 x 30 x 2mm.
- Heavy Load:** Rectangular tube 60 x 30 x 2mm.

Kimer also offers a slotted post for wall-mounted applications.

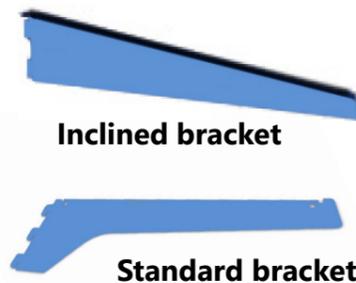

UPRIGHT

Brackets

Support the shelves. We offer 5 bracket models:

- Standard bracket
- Inclined bracket
- Reinforced bracket
- Reinforced inclined bracket
- Bracket for wood and glass

Inclined bracket

Standard bracket

Feet

The main function of the feet is to distribute the weight supported by the shelves to the floor. Available foot models:

- Low foot:** 185mm.
- High foot:** 235mm.

They include an adjustable leveling foot.

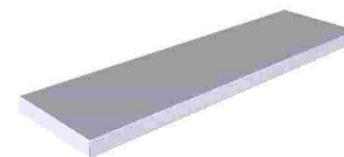

185 -235 MM

Shelves

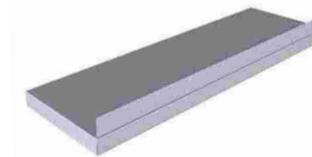

We offer two types of shelves:

NC Shelves: Straight front fold. No need for price tag holders. If needed, adhesive price holders must be added.

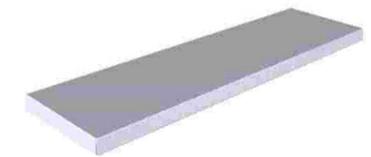

Price Holder Shelves: Include extra front folds to fit plastic price tag profiles. Not recommended if price tag profile will not be used.

NC SHELF

SLOTTED SHELVES WITH STOP

PRICE HOLDER SHELF

For maximum quality, reinforced shelves should be used. The number of reinforcements depends on shelf size. If minimal load is needed, shelves without reinforcement are also available.

All shelves are available in depths of 200, 300, 400, 500, and 600. We offer the following lengths:

NC and Price holder					
800	900	1000	1100	1200	1300

Slotted with stop			
800	1000	1200	1300

Main components

Back panels

Kimer offers three types of back panels: Smooth and two perforated models.

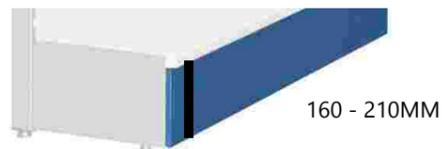

All back panels are available in depths of 200, 300, 400, 500, and 600, and we offer the following widths:

Panel width					
800	900	1000	1100	1200	1300

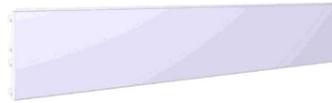

Maximize your business functionality by incorporating all accessories available for perforated back panels.

Baseboards

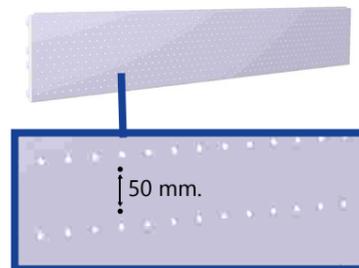

Easily attached to the feet. We offer two heights:

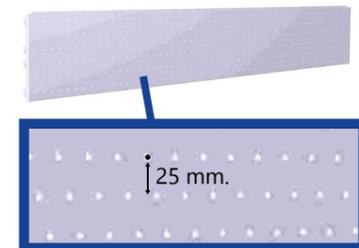

SMOOTH PANEL

PERFORATED PANEL

PERFORATED PANEL (M.2)

Ceilings

Kimer ceilings combine **aesthetics and functionality**, with two available widths (100 and 200) and various ceiling accessories:

We also offer a version with an inclined ceiling to make your brand visible at the top of the shelving, and a mirrored ceiling version for extra functionality.

BASIC CEILING FRONT PANEL

BASIC CEILING BOTTOM COVER

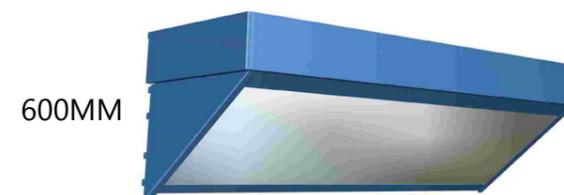

BASIC CEILING TOP COVER

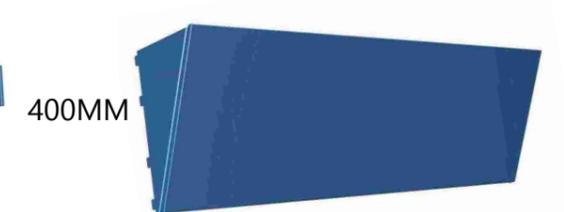

BASIC CEILING BOTTOM COVER (Lights)

INCLINED CEILING

CEILING WITH MIRROR

INCLINED CEILING

Accessories

Retainers and dividers

Kimer offers custom-made retainers and dividers, developed to prevent movement or to compartmentalize products.

Retainer sizes					
800	900	1000	1100	1200	1300

When it comes to organizing merchandise, having a compartmentalized and structured space is very useful. Kimer's dividers are easily inserted into the retainers, allowing the space to be quickly adjusted as many times as necessary.

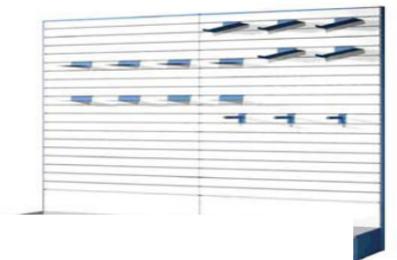

Divider sizes			
300	400	500	600

Accessories and slatwall back panel

The slatwall back panel allows maximum use of the rear part of commercial systems.

Thanks to the slatwall, you can present your product in a flexible, aesthetic, and elegant way.

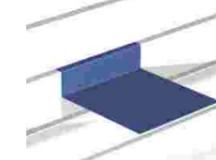

Shelving with slatwall back panel

Kimer offers you a wide range of accessories for slatwall back panels.

STETIC HANGER HOLDER

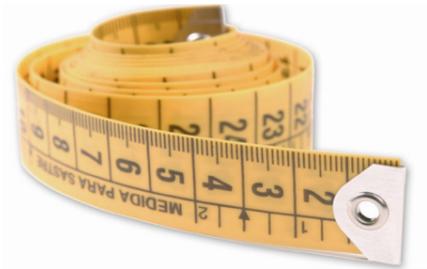

Tailored to you

We adapt to your needs to achieve corporate identity and elegant, unique spaces.

Our commercial shelving allows endless possibilities, but if you still need something specific, our technical department will work to propose new solutions.

Kimer offers highly flexible machinery, which allows us to adapt to your ideas and create a product tailored exactly to your needs.

Product customization with corporate color.

Corporate slotting on your shelving components.

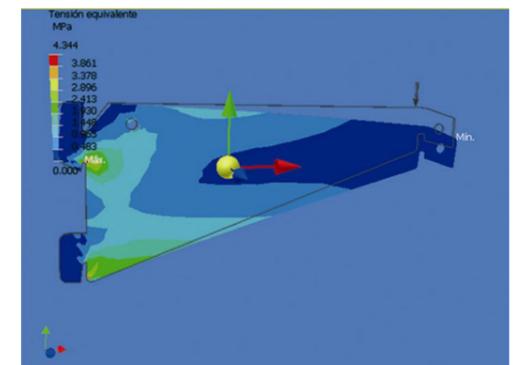

Specific development of your components.

R&D Proven quality

Observation, experience, technology, and effective consulting with full guarantee are the values from which Kimer has designed all the components of this system.

Nothing has been left to chance, and for that reason, all components of our system have been tested. The Polytechnic University of Valencia, in collaboration with Kimer, has conducted load tests to ensure the quality of the product. Once specific load data is obtained, Kimer applies the most stringent safety margins on the market.

THE BRAND

At Kimer, we have been designing and manufacturing storage systems for over 60 years.

We work every day to help you make the most of your space. We manufacture all types of storage racking systems, applying the same dedication and enthusiasm to every project, regardless of its size.

Everyone at Kimer is confident in our ability to help you find everything you need for your new warehouse installation.

HISTORY

When Kimer opened its first factory in Quart de Poblet in 1963, it contacted local artist **Nassio Bayarri** to create a piece that would reflect the company's image and aspirations.

As a result, Nassio created the artwork that now crowns our façade, made from our very first product: the slotted angle profile. The piece represents the Moon landing, and was completed in 1968. Apollo 11 landed on the Moon in 1969—one year after Kimer installed this sculpture. From that moment until today, Kimer has remained at the forefront of technology and development.

Looking to the future, **Kimer** continues to focus on growth based on quality, environmental awareness, and technological innovation.

R&D DEPARTMENT

At **Kimer**, we have an R&D department that designs all our products using the most advanced structural analysis software.

We study stress, deformation, and tension distribution to ensure our installations are **100% safe** while offering **the most competitive prices**.

To validate our calculations, the main components of our products are tested for breakage, deflection, and fatigue, both internally and by independent laboratories.

KIMER QUALITY

EN 1090 Certification

Kimer is certified to issue CE marking for self-supporting structures. This standard includes regular testing of welding penetration on both robotic and manual welds.

ISO 9001 Certification

Ensures ongoing quality controls and the traceability and registration of our products.

All our products are 100% manufactured by Kimer.

We use only certified premium-grade steel.

We guarantee full traceability of all components.

100% Spanish manufacturing.

We apply the most rigorous design standards on the market.

Our key components are regularly tested by independent, highly regarded laboratories.

We do not use harmful components in our painting processes.

We recycle all process water using reverse osmosis.

We treat contaminated elements via pyrolysis for later recycling.

ENVIRONMENT

FAMILY-OWNED COMPANY

At Kimer, we are deeply aware of the current environmental crisis and strive to be part of the solution.

That's why we are committed to the following actions:

- ▶ A 714 kWp solar self-consumption installation, preventing the emission of 400 tons of CO₂ per year.
- Eliminating all harmful components from our painting processes.
- Recycling all water used in our production through reverse osmosis.
- Pyrolysis treatment of contaminated elements for responsible recycling.
- Minimizing natural resource use and the generation of hazardous waste.

**KIMER HOLDS
ISO 14001
ENVIRONMENTAL
CERTIFICATION**

At Kimer, we take great pride in being a **family business**. For over 60 years, we have evolved and adapted to changes in the market, always maintaining strong values and a family-oriented culture. This allows us to offer **close, personalized** service and find the right solution for every client.

We are truly proud to be what we are: a family company.

INTERNATIONALIZATION

TECHNOLOGY

Today, Kimer exports **80% of its production to over 45 countries.**

Our experienced commercial and logistics team allows us to meet both national and international demands in a constantly evolving industry.

Currently, Kimer operates two production plants totaling over 25,000 square meters, with a production capacity of 55,000 tons per year.

At Kimer, we use the latest technologies in the manufacturing of steel profiles. Our state-of-the-art CNC roll forming machines deliver clean cuts and precise punching.

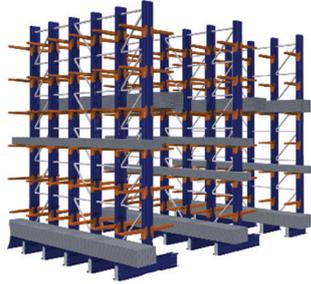

We apply robotic welding controlled by artificial vision systems to ensure clean, uniform welds with virtually no spatter. We also have in-house laser cutting technology (for both tubes and sheets), allowing us to develop custom accessories to meet all our clients' needs.

With automated painting booths, we apply epoxy coatings that give our products high chemical resistance to corrosive substances, along with a high-quality aesthetic finish.
